

An appeal to the world's foundations and philanthropists by the world's environmental prize winners

*“Aghast that the Earth is heading for 4 to 6 degrees Celsius
of global warming, given current policies on the burning of coal, oil and gas;*

*Terrified that we will lose our ability to feed ourselves,
run out of potable water, increase the scope for war, and cause the very fabric of civilization to crash
as a consequence of the climate change that global overheating will bring about;*

*Devastated that our governments have not succeeded yet in slowing,
much less stopping, the flow of greenhouse gases into our thin atmosphere,
in the full knowledge of these risks, despite a quarter century of trying;*

*Aware that the UN Climate Summit in Paris in December 2015
may be the last chance to agree a treaty capable of saving civilization;*

*Believing that the world's philanthropic foundations, given the scale of their endowments,
hold the power to trigger a survival reflex in society, so greatly helping those negotiating the climate treaty;*

*Recognizing that all the good works of philanthropy, in all their varied forms,
will be devalued or even destroyed in a world en route to 6 degrees of global warming or more,
and that endowments that could have saved the day will end up effectively as stranded assets;*

*We, 160 winners of the world's environmental prizes, call on foundations and philanthropists
everywhere to deploy their endowments urgently in the effort to save civilization. ”*
